ISBN: 9781843311591
Extent: 283 pages
Size: 234 x 156mm / 9.2 x 6.1
Illustrations: 22+ halftone illustrations

Description
An enlightening, multi-disciplinary investigation into the biological sciences during the nineteenth century when fundamental discoveries in geology and physics dramatically destabilized the Victorian worldview.

‘Each of the essays has a sparkle and charm of its own... [they] take us into relatively unexplored regions and offer fresh insights into their own particular subject area.’ — Victorian Studies

This important new book, including contributions from some of the most distinguished experts in the field, demonstrates that the relation between literature, culture and biology in the nineteenth century is far more complex than habitual references to Darwin would have us believe.

Readership: Will appeal to those with an interest in the science, culture and literature of the Victorian era.
